Executive Overview

Millennium is a distributor of telecom equipment used in the construction and operation of public networks. Founded nearly 20 years ago, Millennium has grown rapidly over the last five years. With revenues approaching \$400M, Millennium recognizes the need for an Information Technology (IT) infrastructure that can service the needs of a distributor of their size and also provide the platform for the company to continue to grow.

Millennium seeks to develop two strategic plans to enable the definition and development of their target IT service platform. First, they seek to define an application component architecture that will provide services to their organization for ordering through to cash, for fulfillment, and for accounting and compliance requirements. Second, they seek to define a data architecture strategy that can expand the usage and scope of data within the organization to better answer questions about their business, their customers and their performance in the market. Millennium also seeks to prepare for the use of Artificial Intelligence (AI) tools that the business can leverage for productivity enhancements.

Who is nvisia?

nvisia is Milwaukee's largest software product development partner. We have offices also have offices in Chicago and, in 2019, expanded our locations to a third office in Madison, WI. All our consultants are full-time, local employees of our firm. None of our work is ever off shored. Meaning we will work within the same time zone that will ensure more focused collaboration and real-time/prompt responses. nvisia is veteran owned and has been in business for over 30 years by the same owner – we bring stability as a software partner. We have an average tenure of 7 years for consultants and 15 years for Senior Leadership (~10-year average for all employees).

What does this mean? It means that we have an in-depth understanding of our teams, their competencies, and mutual familiarity. *We know our people, and they know each other!*

At nvisia, we have incomparable **senior consulting talent**. Our team can provide true architectural and delivery leadership to your organization. When you have projects that are crucial to your business and revenue, entrusting them to nvisia guarantees exceptional delivery, quality, reliability, and proficiency.

Capabilities

We are experts in Software Strategy, Architecture and Engineering, Cloud, DevSecOps, Product Management, Agile, User Experience, & Data and AI.

The Practice Areas of our Firm:

Software Architecture & Engineering

Our core competency lies in software architecture and engineering. Whether it's content management systems or customized products, our team has the knowledge and skills necessary to create software quickly and with the utmost quality.

Our architects and developers collaborate to deliver a comprehensive, feature-rich system that is easy to support and maintain. With nvisia as your partner, you can rest assured that your software development needs are in good hands.

DevSecOps / Cloud

Simple, scalable and cost-effective infrastructure built with DevSecOps discipline to ensure each production deployment is rock solid.

DevSecOps is in our DNA. Before the term existed, our developers wrote unit tests, collected coverage metrics, used build servers, and automated their deployments. They owed each other donuts if they broke the build. They did TDD and end-to-end testing. They met with Operations to discuss errors in log files. They had – and continue to have – discipline.

Today, DevOps techniques – especially the Ops side – are advanced enough to require people who specialize in them. We have these experts.

We are the creators of Digital Foundations – a service we developed to help your organization quickly and efficiently build a secure, compliant, and scalable cloud infrastructure.

We are accredited and certified partners with Docker.

Agile Product Management

nvisia Product Managers are experts in product and project management. They will coordinate your stakeholders and user communities, define your product roadmap, align your teams to it, drive requirements details, steer your backlog, ensure software quality, and see you through to a successful launch. They are agile, collaborative problem solvers. They know how to take software to market.

UI / UX

Our award-winning Creative department is your blueprint to customer satisfaction. We prioritize user-centered design, ensuring that your software is easy to use, looks great, and aligns with your users' needs.

They will follow a design thinking methodology – conducting user research to empathize with your claimants and staff, bringing new ideas for how modern technology can solve their problems, creating wireframes and high-fidelity prototypes to demonstrate those ideas, and then gathering feedback on the design before it is built.

Data, Analytics & AI

To take advantage of new technology, businesses look to their data, the insights it can provide, and the efficiencies it can unlock. nvisia is at the forefront of these technologies, working with large enterprises to process vast amounts of data in motion and with cutting-edge startups to provide AI-enabled products and services. We can provide the necessary skillsets to your teams to deliver these same types of systems for you.

Approach

nvisia is proposing a 6-week discovery engagement to assist Millennium in shaping their strategy and high-level plan to transform their IT infrastructure into a supportable IT solution. We start with a current state deep dive of the application and surrounding processes, then we examine the desired future state (requirements) for both the application and the data architectures. nvisia will meet

with members of both the application and infrastructure teams to understand the current state, and desired future state, and to help understand the needs of the business, the IT requirements and the needs of the organization. Finally, informed by more than 30 years of collective experience in IT architecture, we collaborate with the Millennium team to shape an actionable plan to transform the IT platform.

Current State Review Workshops

Deep Dive into Millennium IT

nvisia will quickly gain an understanding of the existing solutions, reviewing current pain points regarding ordering, fulfillment, compliance, and performance. Additionally, nvisia will review the existing data architecture, build entity relationship diagrams and map the data architecture to current and future requirements. This deep-dive will elicit the information needed to define a new endstate application architecture that will define a plan and path for enhancing the Millennium components that will surround the NetSuite COTS application for sales, fulfillment and management support, planning, administration and security.

Understanding what could be

During the current state review, we look for issues and opportunities in the application architecture, software design, development environments, CI/CD pipelines, target platforms and application observability. We will discuss options for tooling and processes updates to help improve developer setup, reduce/remove manual steps for building and deploying, and ways to streamline to how code gets to production using containers, automation (pipelines) and orchestration. These efforts will result in a data architecture plan that will define a path to AI preparedness. This includes a data repository that would be support mirror image duplication of the NetSuite data to a Millennium image, consolidation and de-normalization of the NetSuite data into a format that would allow for calculations, and a meta-data repository where answers to business questions can be calculated. For example, NetSuite defines a customer with 37 separate tables. The mirror image repository would acquire the data from NetSuite in the original format, then consolidate/denormalize the customer data into a more user-friendly format in the intermediate format, which would allow for calculations like 'Who are our good customers?' Or 'What are the features of our products that resonate with customers?' can be calculated in the meta-data repository. This would all be done in preparation for AI readiness. We plan for the data architecture paper to define a detailed view of this three-tiered data architecture.

Future State Workshops

Collaborative Design

Millennium IT leadership and nvisia will discuss best practices for a future state application and data architecture and look for any other issues that would prevent

those best practices from being followed. Review existing workflow and integrations and discuss what would be required to change as the solution moves from current to future state.

Read Out - Architecture and Roadmap to new IT Endstate

The nvisia team will assemble findings, review collaborative decisions, and formulate high-level architectures and roadmaps. The high-level architectures and roadmap plans will be presented to Millennium, along with detailed plans for future stages.

Deliverables

The following deliverables reflect the work that nvisia will deliver throughout this engagement:

- *IT Application Strategy and Architecture Document* – High-level Application strategy and architecture paper including diagrams, sections on current state analysis and proposed future state, with gap analysis.
- *IT Data Strategy and Architecture Document* – High-level Data strategy and architecture paper including ERD diagrams, and sections on current state analysis and proposed future state, with gap analysis.
- *Project Roadmap* – Sequence of architectural, automation, and infrastructure changes expressed as an IT project roadmap and time plan, based on priorities, and organized into a schedule of milestones.
- *Weekly Report Out & Status Meeting* – To ensure success, nvisia will conduct a weekly meeting sharing our findings, initial recommendations, and planned next steps, providing Millennium with the ongoing opportunity to direct the work.
- *Executive Presentation* – Summarizes the detailed findings and recommendations in each of the above deliverables for an executive audience.

The following resources will be provided by **nvisia**. The expected completion time is 6 weeks.

The discovery will be time and materials at an investment of \$15,750. The staffing will include a Strategy Architect and a Data Architect for the project's discovery phase.

Resource	Description	Standard Rate	Hours	Investment
Senior Strategy Architect	Expertise in IT Application and Data infrastructure, design, and administration. Experienced Strategy Architect is able to lead/manage definition of technical roadmap and guidelines.	\$300	30	\$9,000
Data Architect	Most senior level Data Architect within nvisia. Leads Data definition roadmap architecture, consults with technology leaders on best practices, and provide Management level consulting.	\$225	30	\$6,750
Total Investment				\$15,750

Assumptions

This statement of work is based on the following assumptions:

- Millennium will provide timely access to business stakeholders and key users.
- Millennium will provide timely access to any systems and/or assets needed.

- Millennium will provide timely feedback on all deliverables tied to this statement of work.

Completion Criteria

nvisia shall have satisfied its responsibilities under this Statement of Work when 1) the Deliverables have been provided; or 2) **nvisia** has provided the specified number of person-days/hours of services; or 3) the mutually agreed upon project end date expires; or (4) **Millennium** terminates this Statement of Work with a minimum of twenty (20) business days' notice, whichever occurs first. For the avoidance of doubt, all invoicing by **nvisia** and payments by **Millennium** shall operate in accordance with the procedures outlined in the CSA.

Agreement Parameters

This section defines the scope of work to be accomplished by **nvisia** under the terms and conditions of the Consulting Services Agreement ("CSA"), signed between **nvisia** and **Millennium** on April 3rd, 2023. This CSA contains the general contract terms, which will govern the performance of the Services pursuant to the SOW. This CSA addresses payment terms, intellectual property rights, warranty, insurance and other matters. This Statement of Work and the CSA (and any applicable Attachments) represent the complete agreement ("Agreement") between the parties regarding this transaction and replace any prior oral or written communications. Changes to the Statement of Work will be processed in accordance with the procedure described in the CSA.

The investigation and the implementation of changes may result in modifications to the Estimated Schedule, Charges, or other terms of this Agreement.

Under this SOW, **nvisia** will guide, assist and materially contribute to the Project by providing the Services and Deliverables as further set forth herein.

Commitment Signatures

At **nvisia**, **Your Success** is our success. On behalf of everyone at **nvisia**, thank you for the opportunity to present this statement of work to assist with your 2023 initiatives and goals. Should **Millennium** choose to pursue this SOW, once executed, the formalized CSA and SOW will govern the relationship and supersede any prior communications.

Approval

By signing below, **Millennium** and **nvisia** agree that the complete agreement between the two companies regarding these Services consists of 1) this SOW, 2) **nvisia** non-disclosure agreement (or any equivalent agreement signed by both of us) and 3) the CSA. Once signed, any reproduction of this SOW by reliable means (for example, photocopy or facsimile) is considered an original, unless prohibited by local law.

If **Millennium** internal processes require a purchase order in order for **nvisia** to invoice for the Services rendered under this SOW, the purchase order (which must reference this SOW number) should be faxed to **nvisia**'s Chicago office at (312) 985-8101 before work commences.
